Konstantinos Papadogiannis

Junior Software Engineer | **Backend** | **Cloud & DevOps** | **Machine Learning**

Athens, Greece konstantinospapadogiannis.dev@gmail.com
in/konstantinos-papadogiannis github.com/KonstantinosPapadogiannis

Informatics and Telematics graduate (B.Sc. 2026) who builds backend services, web applications and their cloud deployment in Go, Java/Spring Boot, Python, React/TypeScript and Kubernetes. Thesis: a Hyperledger Fabric system whose browser wallet signs on the user's own device; also machine learning and NLP projects measured against baselines.

EDUCATION

B.Sc. in Informatics and Telematics 2022 – 2026
Harokopio University of Athens Average 7.51 / 10

- Bachelor's Thesis: 10 / 10
- Relevant coursework: DevOps Concepts and Tools (10/10), Computer Networks (9/10), Distributed Systems (8/10)

BACHELOR'S THESIS

Development of a Decentralised Application (dApp) and Smart Contracts for the Digital Submission and Management of Subsidies Apr 2026 – Sep 2026
Written alongside a companion thesis on the network infrastructure; supervisor: Asst. Prof. Anargyros Tsadimas

- Built the application layer of a seven-organisation Hyperledger Fabric network for EU farm subsidies: Go chaincode, backend APIs and React/TypeScript portals
- Developed a Manifest V3 browser wallet that generates each farmer's ECDSA P-256 key with the Web Crypto API, encrypts it with AES-GCM under a PBKDF2-derived key and signs transactions locally, with proposal checks that block blind signing
- Enforced a versioned subsidy policy with role-based access control (Keycloak OIDC) and private data collections
- Tested roles, state transitions and end-to-end flows, and benchmarked wallet signing on 2011 and 2022 hardware

SELECTED TECHNICAL PROJECTS

TradingAgent: ML decision-support system for crypto markets Oct 2026 – Present
Independent research project, team of two

- Co-design a system in which a custom ML model issues calibrated probabilistic forecasts and a separate decision agent turns them into recommendations within cost and risk limits
- Evaluate gradient boosting, LSTM and transformer models with walk-forward backtesting on point-in-time data, pre-registered hypotheses and a locked hold-out period

OpenStack private cloud on Google Cloud Jun 2026
Cloud Computing Management, individual

- Installed DevStack on a GCP VM and hosted a three-tier app, working around GCP's floating-IP and routing restrictions

Social Media Monitoring Agent: search, NLP and summaries over tweets Apr 2026
Natural Language Processing and Information Retrieval, team of two

- Built hybrid BM25 and sentence-transformer search over 10,896 tweets in FAISS, evaluated with Precision@k and nDCG@k
- Classified emotions with a pre-trained Twitter-RoBERTa model (micro F1 0.71 against 0.63 for a TF-IDF baseline) and served RAG summaries with DistilBART through FastAPI

ErgoHub: freelance marketplace on Azure Kubernetes Feb 2025 – Jul 2025
DevOps Concepts and Tools, team of two

- Built Jenkins pipelines and Ansible playbooks to test, containerise and deploy the app
- Deployed Spring Boot and React/Redux to AKS behind NGINX Ingress with TLS, PostgreSQL and MinIO

SKILLS

Programming: Go, Java, Python, TypeScript, JavaScript, SQL, C, CUDA, Bash
Backend: Spring Boot, REST, gRPC, FastAPI, Hyperledger Fabric (chaincode, private data, Gateway), Keycloak (OIDC), JWT
Frontend: React, Redux, Tailwind CSS, Vite, browser extensions (Manifest V3), Web Crypto API
Cloud and DevOps: Docker, Kubernetes (AKS), Jenkins, Ansible, OpenStack, Google Cloud, Azure, NGINX, Linux, Git
Data and ML: PostgreSQL, PyTorch, Hugging Face Transformers, scikit-learn, pandas, FAISS
Testing: Go testing, Vitest, Playwright, JUnit, Jest
AI tools: Claude Code in daily development, with a custom code-review subagent
Languages: Greek (native), English (professional working proficiency)
